

P2-MMC FAQ

1) How should the P2MMC be configured to work with VirtualVTR

First you should download the Mac version of the P2MMC-USB setup program(p2mmcusb-mac) from our web site

<http://www.colinbroad.com/cbsoft/P2MMC2/p2mmc2.html>

Install this on the same mac as the VVTR, you can then configure, test and update the P2MMC-USB.

- a) Set the RS422 port to input
- b) Select Virtual Machine mode

You should now be able to control the virtual machine from the RS-422 port and monitor the timecode in the setup software.

- c) Select either virtual machine mode or P2MMC mode to control the VVTR. Using Virtual machine mode will maintain Video Lock at all times.
