Yamaha MMP1

TMC-1-MMP1 User guide

This document only describes the Ethernet connections of the TMC-1 and any differences in operation. Please refer to the TMC-1 Reference which is available from the main TMC-1 Web Page.

<http://www.colinbroad.com/cbsoft/tmc1/tmc1.html>

Ethernet Connection

The TMC-1 communicates to the MMP1 via Ethernet, when connected to the network it will discover any connected MMP1's and display them. If it has been paired with a MMP1 and recognised the Serial number it will select the paired MMP1.

To check the Ethernet connection depress [Select] and [Page] together to enable the Page select menu. From the Page select menu depress the [E-Net] key to display the MMP1 pages. Use the [<] and [>] keys to step through.

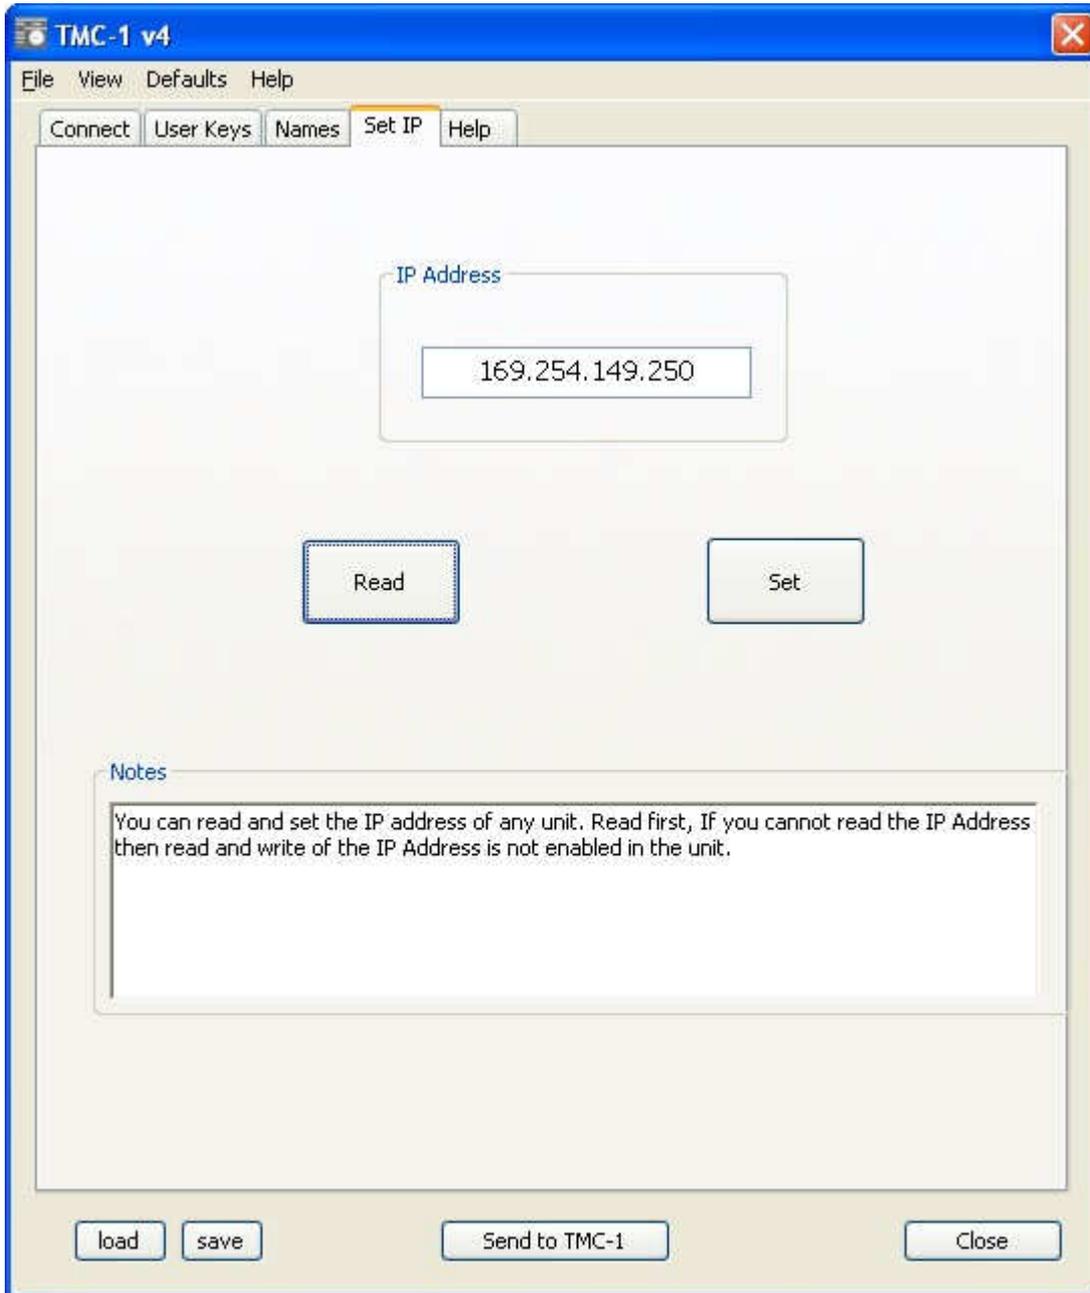

Note 1: Once the TMC-1 discovers the MMP1 selecting the MMP1 on the TMC-1 Discovery page will set the TMC-1 to be on the same subnet as the MMP1.

Note 2: It may be necessary to set the subnet address of the TMC-1, the default IP address of the TMC-1 is 169.254.149.250. If you have a DHCP server on your network use the DHCP key on the Discovery page to select a free IP address, If not you can set the IP Address of the TMC-1 using the TMC1v5 or Midiupd Mac/Windows programs

Note 3: The MMP1 serial number & Mac address is unique to each unit and are used to define the destination instead of the IP address.

Setting the TMC-1 IP Address from the TMC-1-win/mac program

MMP1 4.1 Implementation

The TMC-1-MMP1 and MMP1 are both new, not everything is implemented at this time, Yamaha have provided restricted access to the MMP1 functions to the TMC-1. More functions are available in the iPad emulation mode.

Function	Details	Connection/Notes
Input and output names	Not available from MMP1	
Control Room Gain Control	1 dB steps	
Dim	The Dim action is set by the MMP1 Editor	The TMC=1 reads the MMP1 setting
Mute	Control from both MMP1 Remote App and TMC-1	
Cal-A, Cal-B	Independent on MMP1 Remote App and TMC-1	
Source Selection	8 inputs:	Only available in iPad emulation
Source Summing		Only available in iPad emulation
Speakers Set Selection	Up to 4 Sets – Default 3 Sets Main, Alt, Mini	Control from both MMP1 Remote App and TMC-1
Speaker naming	The TMC-1 reads the fist 7 characters of the speaker name from the MMP1 in iPad emulation mode	
Cue Inputs	The TMC-1 will select the last 3 inputs as Cue in 1, Cue in 2, Cue in 3.	
Cue outputs	Define on the MMP1, the TMC-1 can control up to 4 cue sends and will read the first 7 characters of the name	
Cue output source selection	Link to Control room source, Cue in 1, Cue in 2, Cue in 3, T/B 1, T/B 2	
Talkback Input	Internal and External T/B Mic's can be defined	Routing controlled from TMC-1 only displayed on MMP1

TMC1-MMP1 Monitor Controller

		MMP1 Remote App. Gain control from both MMP1 Remote App and TMC-1
Listen Inputs	One input only	Control from both MMP1 Remote App and TMC-1. Gain control from both MMP1 Remote App and TMC-1
Bass management	Use the [Bass-X] user key on the TMC-1	Control from both MMP1 Remote App and TMC-1.
LFE +10dB	Use the [LFE+10] user key on the TMC-1	Only available in iPad emulation
MMP1 Phones O/P	[Phones] User key on TMC-1	Controlled from both MMP1 Remote App and TMC-1
AFL Gain and Switching	No tally available from MMP1	
Mono	Not yet available on MMP1,	
Individual Speaker Trims		Only available in iPad emulation
Input Trims		Only available in iPad emulation
Snapshot Selection	User keys Snap1 - Snap-	
Scene Selection	User keys Scene1 - Scene5	
Cough	User keys Cough1 - Cough8	
IPad Remote Emulation	Advanced Menu 24 - The TMC-1 can switch the TMC-1 to iPad emulation mode	

MMP1 E-Net Pages

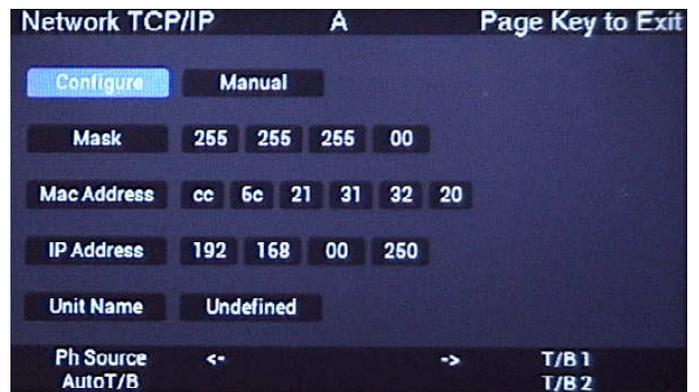

Discovery

This page displays the MMP1 units discovered by the TMC-1 (Max 4). The unit highlighted in Yellow is the currently connected unit. To select, use the [<] and [>] keys and then depress the [Select] key.

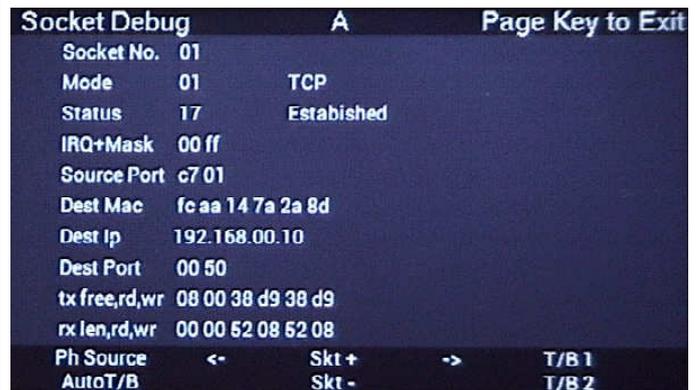

Network Page:

This Page shows the current setup of the Network connection. The TMC-1 copies the subnet address from the selected MMP1 on the Discovery page, the last number (249 in the image) may be defined from the "TMC1-MMP1" program on Mac or Windows with the Unit Name.

Socket Debug:

Used to debug systems, You can change the socket number using the [+] or [-] keys. Socket 00 = Discovery and setup
Socket 01 = MMP1 Control
Socket 02 - Meters

Other MMP1 Pages

Cue Sends Page:

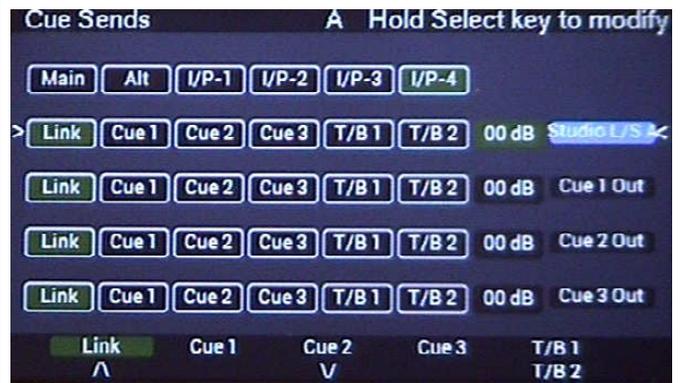

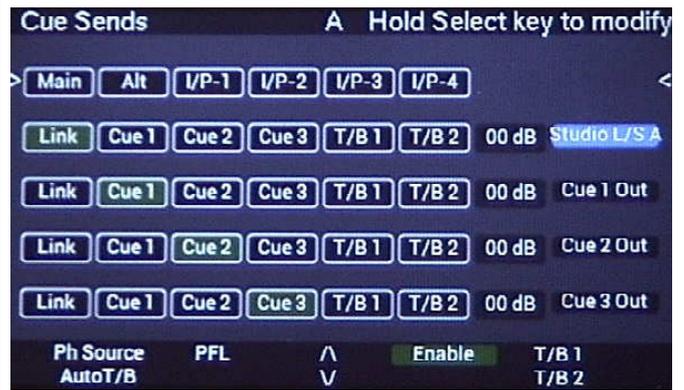

[Enable] mute/unmute the selected output.

[PFL] will route the selected cue output to the current monitor output

[Link] will route the current control room source to the selected cue output

Talkback routing must be specified on this page

Depress the [Select] key to enable the source selection and gain for the selected cue output as shown in the lower picture.

TMC1-MMP1 Monitor Controller

LFE +10

The [LFE+10] user switch will enable/disable the LFE +10 setting on the MMP1

Stereo Downmix

The [St Down] user key will enable/disable the stereo downmix on the MMP1.

Talkback

The Main difference between TMC-1 and MMP1 is the way in which the talkback routing is defined. The TMC-1 provides engineer (T/B 1, T/B 2 ,T/B All) and Producer (T/B 1x, T/B 2x ,T/B Allx) to 3 groupes of destinations. T/B 1 and T/B 2 destinations are defined by the user on the TMC-1 'Cues Page'. SLS is routed to Studio Speaker 1, Cue 1, Cue 2 and H/P are routed to cue outputs 1, 2 and 3.

The Engineer talkback keys [T/B 1], [T/B 2] and [T/B All] adjust Trims 1-1 and 1-2 .

The Procucer talkback switches [T/B 1x]. [T/B 2x] and [T/B Alx] that adust Trims 2-1 and 2-2.

Auto-Dim

If "Auto-Dim on Talkback" is enabled on the MMP1 session settings then the MMP1 Dim control will be used by the TMC-1. If not then the TMC-1 will use its Dim Setting to adjust the gain of the MMP1.

Cue Monitoring Mixer

TMC-1 Label	MMP1 Label
SLS (Studio LS)	Cue 1
Cue 1	Cue 2
Cue 2	Cue 3
H/P (Headphones)	Cue 4

Case Study:

TMC-1 Software Update

The software is updated via the USB port using our MIDIUPD program which is available from the TMC-1-MMP1 or TMC-1-XMon MMP1 Remote App.

<http://www.colinbroad.com/cbsoft/tmc1/tmc1MMP1.html>

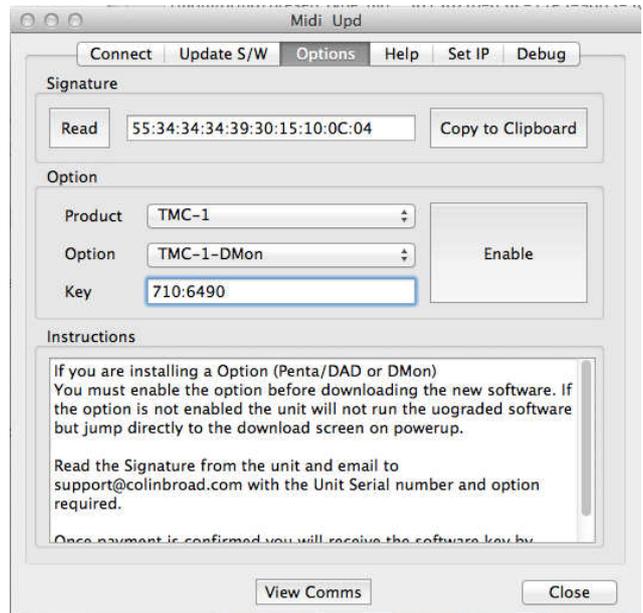

Note. When upgrading from TMC-1-Xmon to TMC-1-MMP1 an upgrade key must be purchased and the MMP1 Option enabled before the MMP1 software is installed. If you install without enabling the MMP1 Option the TMC-1 will jump directly to the software Installation page.

Installing the MMP1 Option

Connect to the TMC-1, (you may have to select the in and out ports). Read the Signature (55:34:34:34:39:30:15:10:0c:04 in this example) from the chip.

E-Mail to support@colinbroad.com

Once confirmed you will receive the software key (710:6490 in this example) by email, cut and paste this into the key window, Make sure that the Option Window shows "TMC-1-MMP1" and click on the Enable button.

HD15 Connector (XMon)

The XMon connector is available on the TMC-1-MMP1 for the following

Talkback Microphone and Headphone

The TMC-1 provides an analogue Talkback Microphone with preamp and Headphone connection which are connected to the HD15 connector. To use connect to Analogue Inputs and outputs on the MMP1.

The TMC-1 is designed for systems that sum the two mic inputs and then have two separate routings both of which are available to each input. To achieve this the talkback routing **MUST** be setup on the TMC-1 as this overrides the talkback routing in the MMP1.

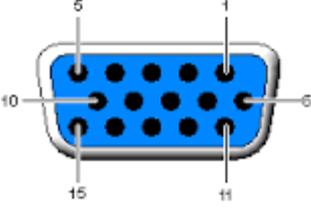

Internal Talkback Microphone

An electret mic amplifier is provided on the TMC-1, normally connected to the internal microphone. A 3.5mm Jack on the rear is provided to that a suitable external "Laptop Mic" may be used. The mic output is on the HP15 pin connector and may be configured with a balanced or unbalanced output.

Headphone Jack

The headphone jack is connected directly to the HD15 pin connector. The input is unbalanced with two ground returns.

HD 15 Connector fitted to TMC-1 units is use for Talkback and Headphones

HD 15 Connector is fitted to later TMC-1 Units			
Pin	Hardware configuration	Function	VGA cable Notes
1	Analog Output	T/B Mic O/P	Screened
2	Analog Input	Headphone Right I/P	Screened
3	Analog Input	Headphone left I/P	Screened
4	O/P	Midi Out -	Check Connected in Cable
5	I/P	RS422 Rx -	Normally Connected in Cable
6	Gnd	T/B Mic Ground	
7	Gnd	Headphone ground	
8	Gnd	Headphone ground	
9	Gnd	Ground	
10	O/P	RS422 Tx -	Normally Connected in Cable
11	I/P	Midi In -	Check Connected in Cable
12	I/P	Midi In +	Check Connected in Cable
13	I/P	RS422 Rx +	Normally Connected in Cable
14	O/P	RS422 Tx +	Normally Connected in Cable
15	O/P	Midi Out +	Check Connected in Cable

TMC-1 Fault Finding

Actual Faults reported and cause

Fault	Cause
MMP1 Not Discovered	It may be necessary for the MMP1 and TMC-1 to be on the same subnet. The TMC-1 has a 100Mbps Ethernet connection, check that the computer port or network switch is set correctly
Talkback not working	The talkback routing must be specified in the TMC-1 cue sends page.
Input Selection Not Working	Check that L/B is Not enabled
Unexpected L/B, talkback, SLS or Monitor Enable/mute	Check Auto-Mute
